

Efficient storage system

UPMOVIOM Storage System is designed to store different types of materials in order to optimize warehouse space. They can be placed from three to ten heights in a single column, according to the size of the bundles and with a weight that ranges between 1000 and 6000kg per single storage location. Best for materials between 3 and 12 meters long.

STANDARDIZED MEASURES OF THE STORAGE LOCATIONS:

- > BIG: 720 * 650mm
- > MEDIUM: 600 * 470mm
- > SMALL: 500 * 300mm

In a given space of 60 m² (10 m wide by 6 m long) we would store 60 - 112 different references depending on the materials and up to 40 more bundles could be added in the upper storage area. Each stored reference needs an average space of less than 1 m², which leads to a greater optimization of space in the warehouse.

Sizes of the storage locations can be adapted on demand. This storage system allows us to extract and introduce any type of elongated material from/to its location in less than a minute with a great saving of time.

Reduces space needs by half

INDIVIDUAL STORAGE LOCATIONS SYSTEM

AN ADAPTED SYSTEM

UPMOVIOM and its individual storage locations system can be easily adapted to each warehouse; placing it on one side, on both sides, between the hall columns, allowing the introduction from one hall and extraction towards another, etc.

It also enables the storage of different types of materials such as steel, aluminium, stainless steel, etc. and it's adaptable to the quantities to be stored.

advantages

1. **Minimizes space requirements**
Up to 220 references in less than 16 meters
2. **Reduction of workforce**
Warehouse can be handled with fewer staff
3. **Contributes to the organization of the warehouse**
Easy maintenance of the facilities
4. **Minimize workplace accidents**
Ergonomic improvement in loading and unloading
Customized solutions
